SRT Gateway

Product Description

SRT to the Power of X

The **SRT-X Gateway** is a specialized implementation of our proven cloudSwXtch software overlay network, optimized for high-performance SRT (Secure Reliable Transport) distribution. It ingests media streams and broadcasts them as SRT outputs to any receiver, in the cloud or on the ground. This gateway solution is ideal for broadcasters, content distributors, and media professionals seeking high-density, low-latency stream management from broadcast networks into or out of any cloud.

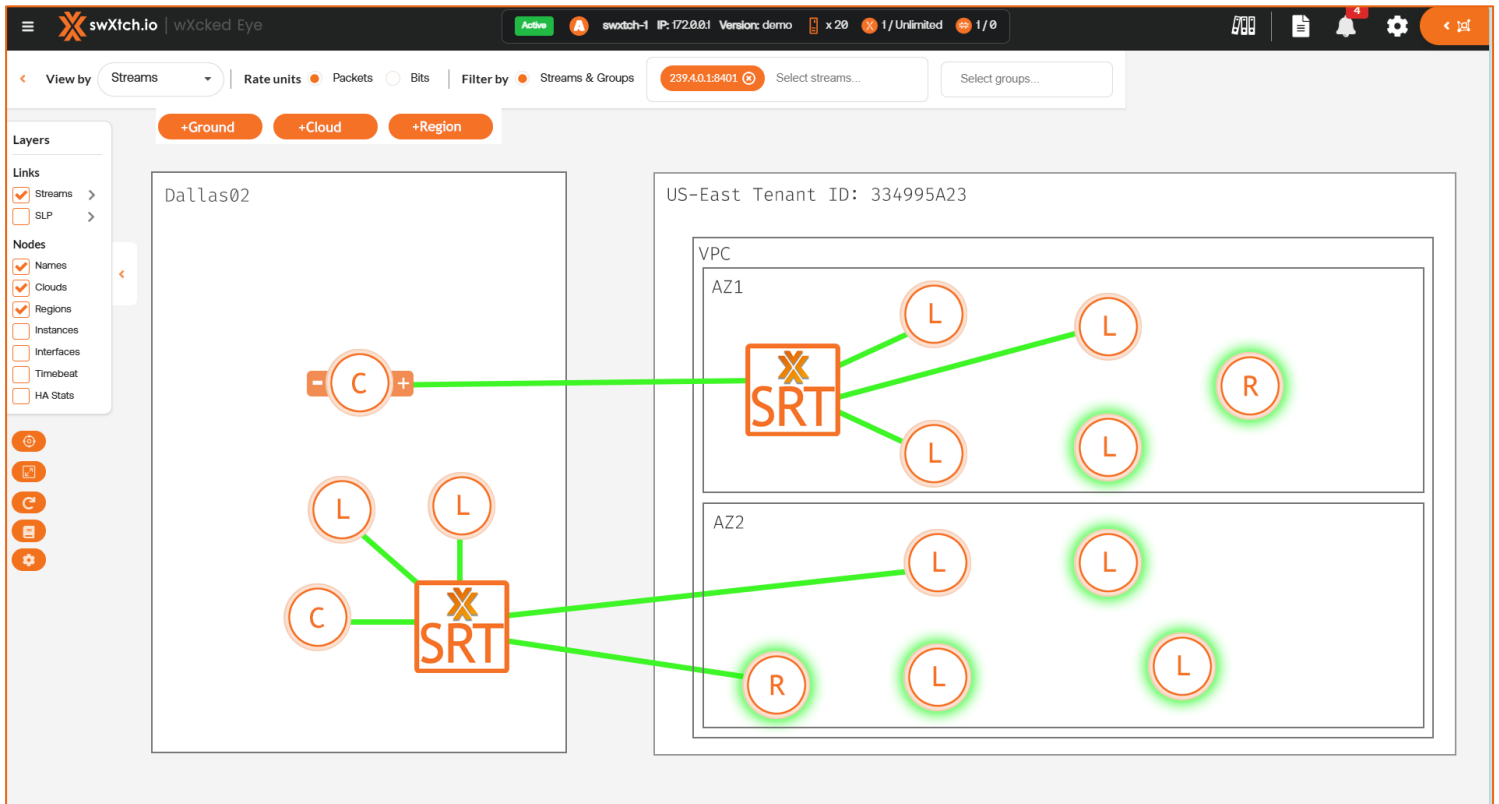

Simple, Low, Predictable Pricing

Run our software anywhere you want.
Pay **pennies per hour per stream**. That's it.

Simple Deployment - Packaged as a containerized software application, **SRT-X Gateway** is easy to set up and run in any environment. Because you only pay for what you stream, deploy instances of the Gateway software wherever you need them. You will only be charged for the streams that you ingest and deliver.

Extremely High Density - Using swXtch.io's patented high-performance networking technology, the **SRT-X Gateway** handles the largest stream count and highest bandwidths using standard cloud VM shapes.

Configuration is as simple as selecting a source and adding destinations. All eligible SRT listeners are highlighted. Selecting any of them completes the SRT connection.

User-Friendly Configuration - Features a simple graphical user interface (GUI) for quick setup of source-to-destination connections, minimizing training time and errors.

Advanced Monitoring with wXckedEye - Integrated graphical dashboard offers comprehensive visibility into stream topology across your entire network. Immediate view of stream performance and quality across hybrid ground-cloud setups, enabling rapid diagnostics and optimization.
